

Module 3:

Search Engines

Topic 2: Google Dorks

Google Dorks

Google Dorking (Google Hacking) is using specific search queries that use Google's search operators, combined with targeted parameters to narrow the search results to find specific information.

Google Dorking can be used to find:

- Information that is difficult to find through simple search queries.
- Information that is not intended to be publicly viewed but that has not been appropriately protected.
- Vulnerabilities exposed by public servers.

Google Dorks

Operator	Usage
<code>" "</code>	Search for an exact match

Google Dorks

Operator	Usage
-	Exclude word/s or whole operator strings from your search results

Google Dorks

Operator	Usage
*	Match any word or phrase

Google Dorks

Operator	Usage
OR /	Get results that might contain one, some, or all of specific words

Google Dorks

Operator	Usage
<code>filetype:</code>	Search for a specific type of a file

Google Dorks

Operator	Usage
<code>site:</code>	Get results from specific domain, subdomain, URL, or URL prefix.

Limitations

The `site:` operator was designed primarily for search users and so it has some restrictions that site owners might find limiting. Specifically:

- The `site:` operator doesn't necessarily return all the URLs that are indexed under the prefix specified in the query. Keep this in mind if you want to use the `site:` operator for tasks like identifying how many URLs are indexed and serving under a prefix.
- A `site:` operator without a query (for example `site:example.com`) doesn't rank the results. It will generally show the shortest URL for the prefix at the top, but otherwise the results are relatively random.

Google Dorks

Operator	Usage
related:	Search for related sites

Google determines the relatedness of URLs by comparing multiple factors, such as the entities mentioned on the page and the general category of the page.

The lack of your URLs showing up for **related:** queries is not an indicator of the quality of your pages, nor any other search signal. The relatedness of URLs is generally only calculated for the most popular URLs on the internet. Moreover, the data that powers the **related:** query operator is not refreshed real time, so recent popular URLs might not show up in results for the **related:** search operator.

Google Dorks

Operator	Usage
cache:	Find the cached version of a web page

Google Dorks

Operator	Usage
<code>intitle:</code>	Find pages with a specific word/s in the title
<code>allintitle:</code>	Same as intitle, but it only returns results that contain every word in the title

Google Dorks

Operator	Usage
<code>inurl:</code>	Find pages with a specific word/s in the URL
<code>allinurl:</code>	Same as inurl, but it only returns results that contain every word in the URL

Google Dorks

Operator	Usage
<code>intext:</code>	Find pages with a specific word/s somewhere in the body text
<code>allintext:</code>	Same as intext, but it only returns results that contain every word in the body text

Google Dorks

Operator	Usage
before:	Get search results before a specific date
after:	Get search results after a specific date

Google Dorks

Source: <https://support.google.com/websearch/answer/2466433?hl=en>

- Don't put spaces between the symbol or word and your search term. A search for `site:nytimes.com` will work, but `site: nytimes.com` won't.

Google Dorks Hands-On

- "Not for Public Release" + "Confidential" ext:pdf | ext:doc | ext:xlsx => Get links to documents meant to be classified. Some come from governmental websites.

- "index of" inurl:ftp secret => Get FTP servers you want to access containing the keyword "secret"

Ex:

<https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=&cad=rja&uact=8&ved=2ahUKEwiYxY2j3YCAAxViU6QEHSMOBnEQFnoECA0QAAQ&url=https%3A%2F%2Fwww.ietf.org%2Fietf-ftp%2Fietf-mail-archive%2F&usg=AOvVaw1V0FFIfubjb3p5CkgUTGly&opi=89978449>

Google Dorks Hands-On

- username and password in files

`allintext:username filetype:log`

- looking for documents that have information about IP Camera.

`allintitle:"ip camera" filetype:doc`

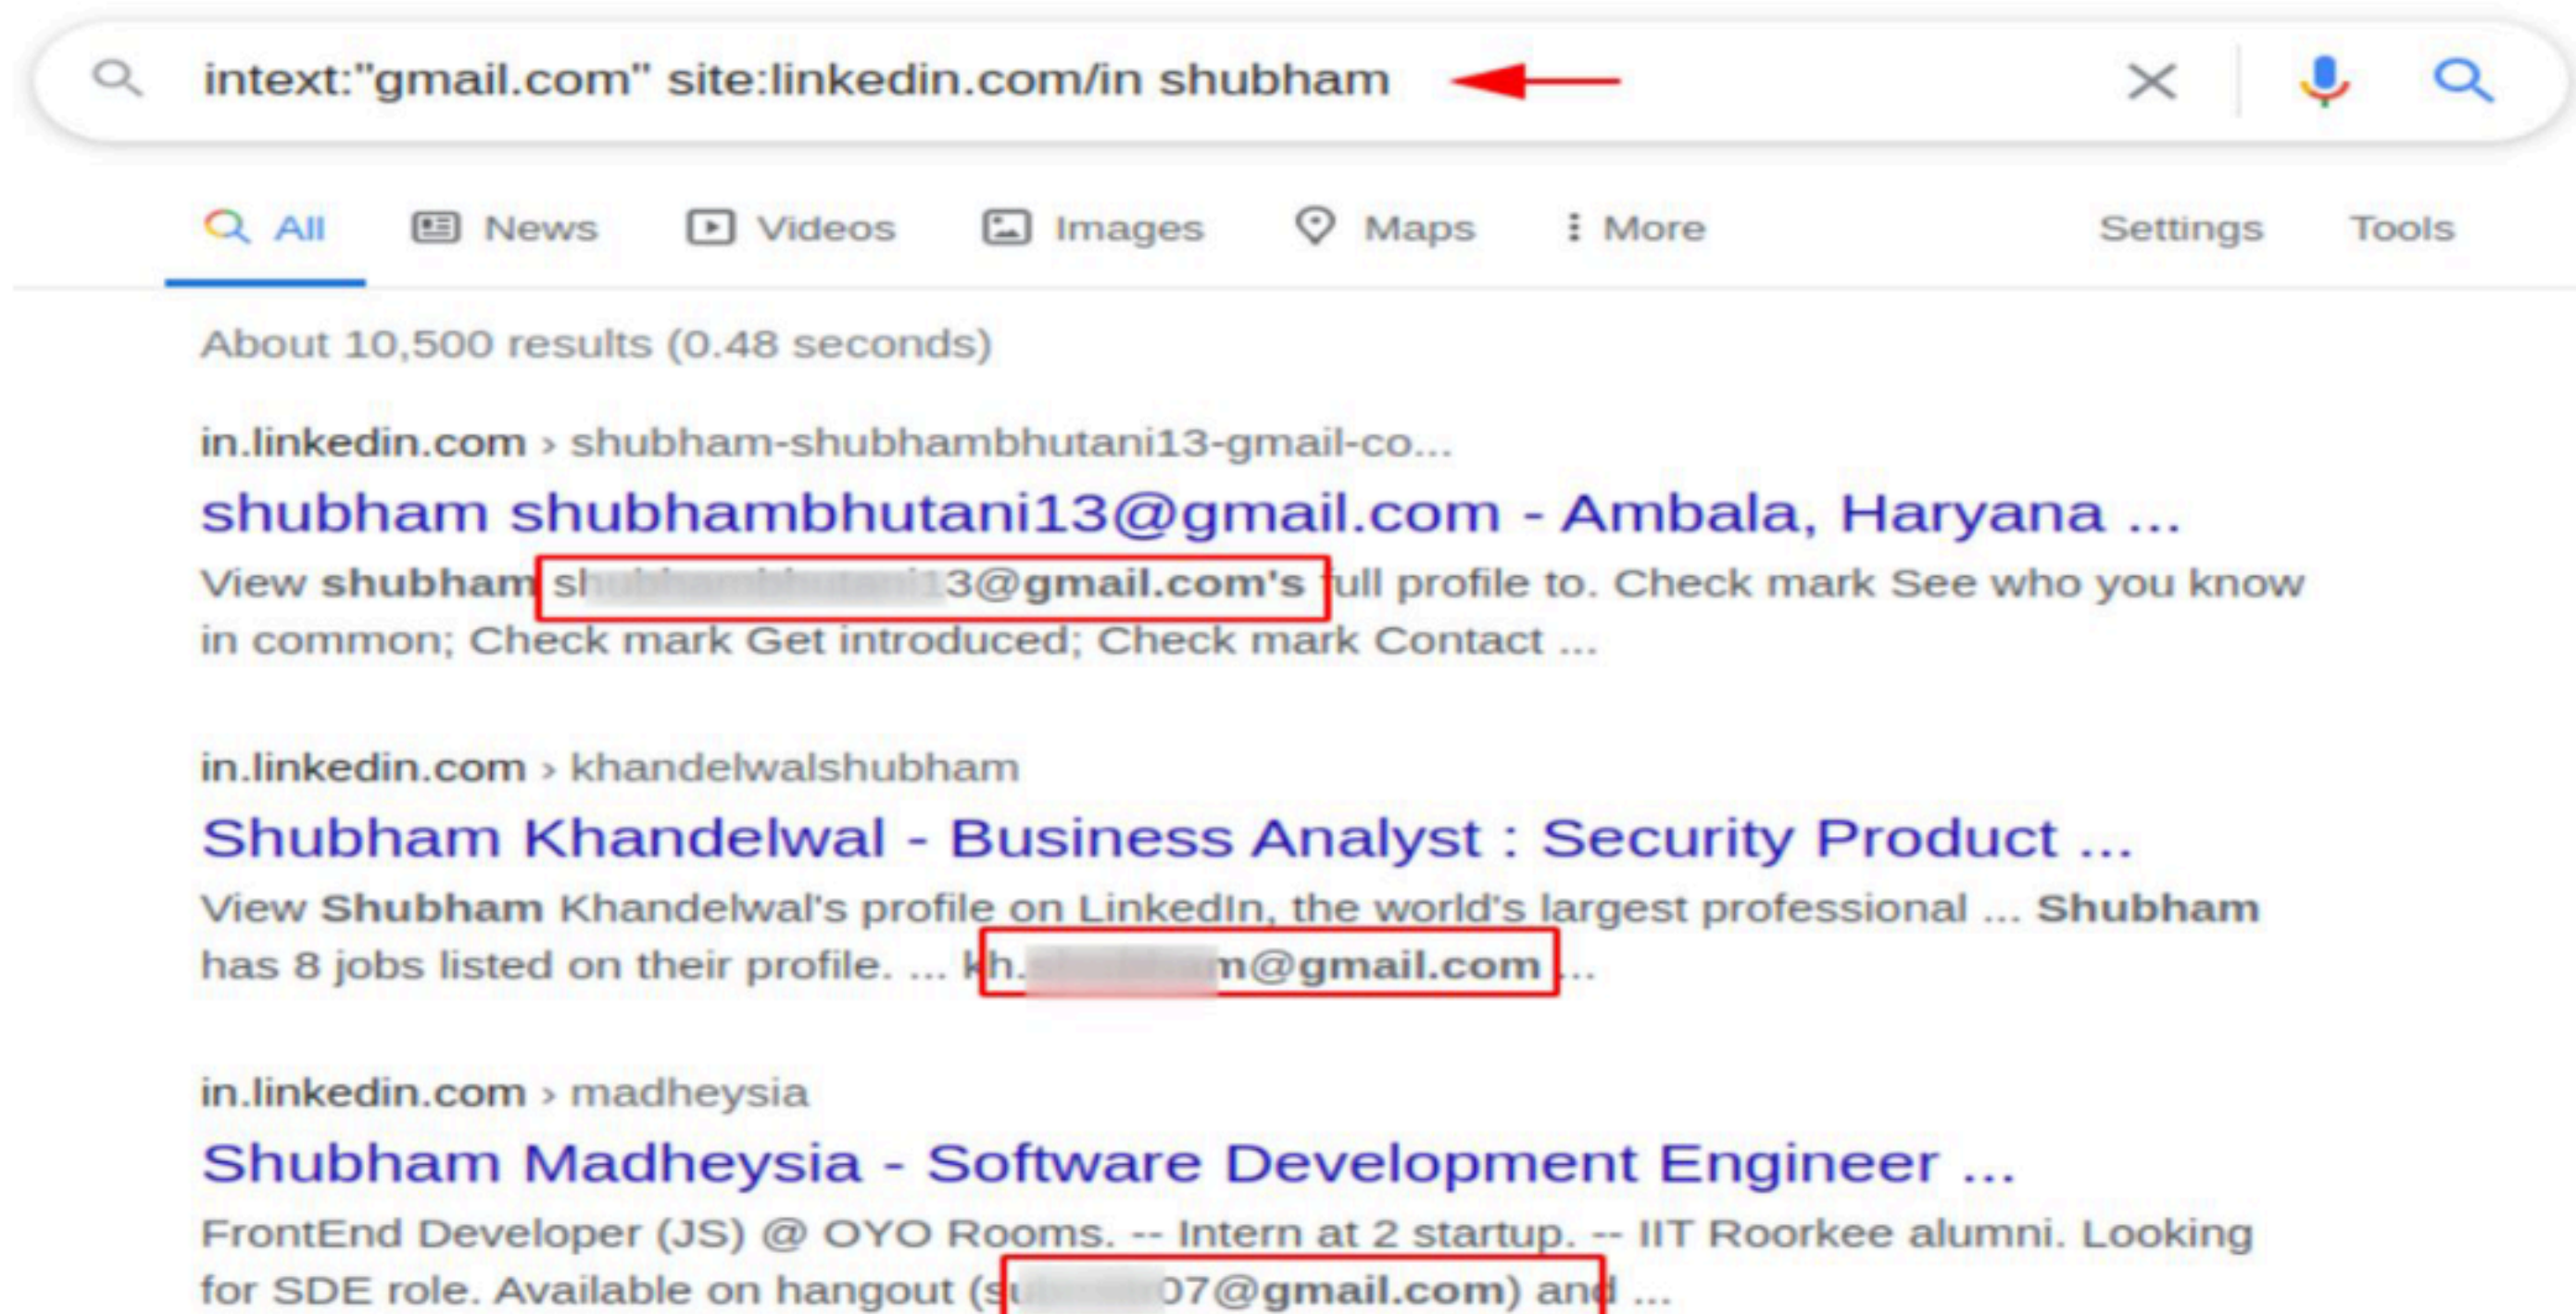

- search about "adams" just in facebook pages

`(site:facebook.com | site:twitter.com) "john adams"`

- search for public zoom meetings

`inurl:zoom.us/j and intext:scheduled for`

Email Extraction Using Google Dorks

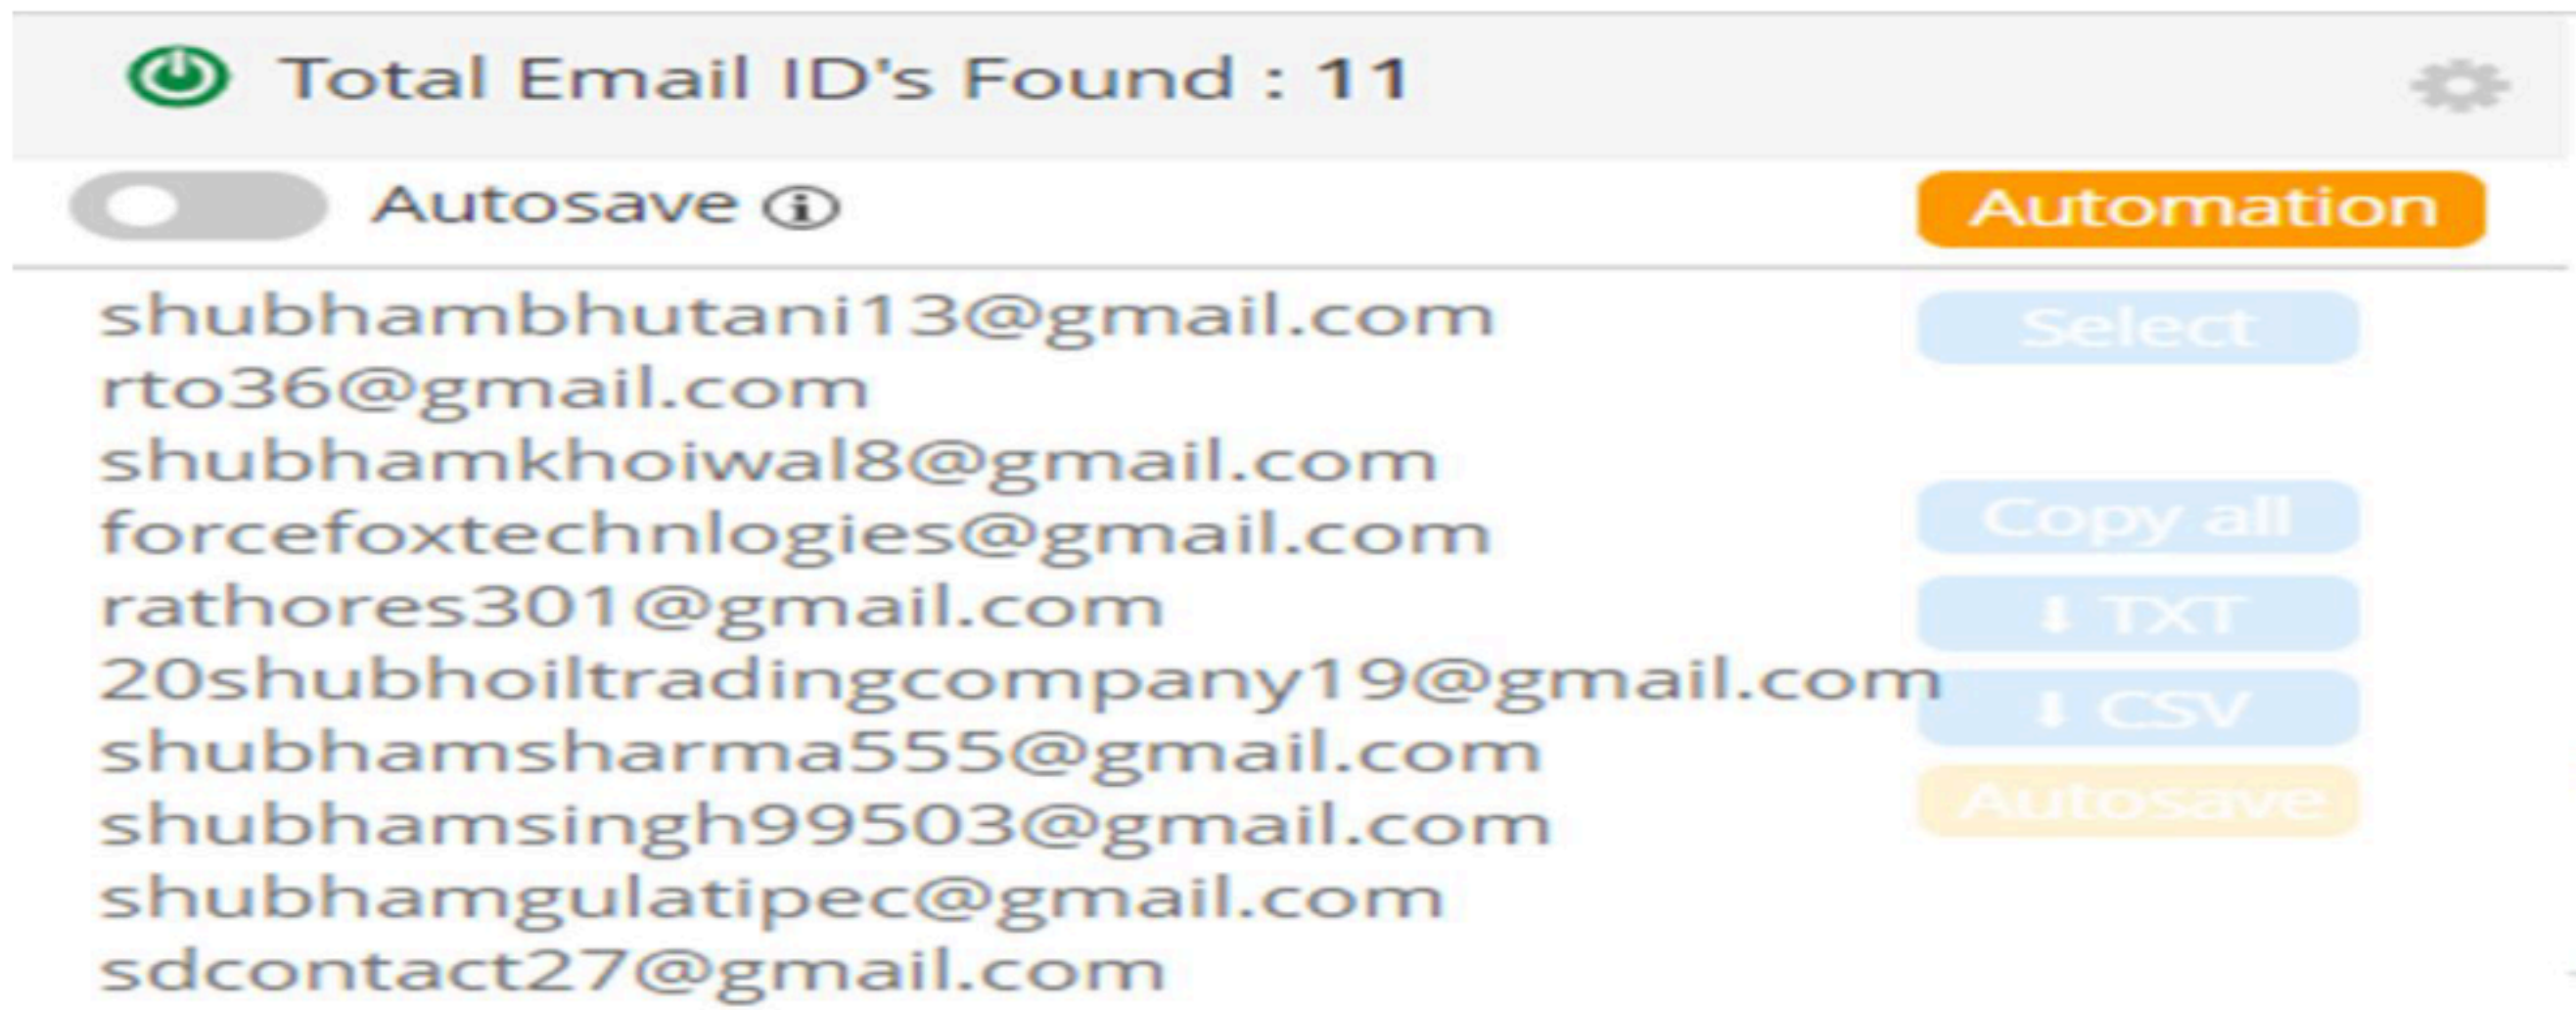

The screenshot shows a Google search interface with the query `intext:"gmail.com" site:linkedin.com/in shubham` entered in the search bar. A red arrow points to the end of the query. Below the search bar, navigation tabs for 'All', 'News', 'Videos', 'Images', 'Maps', and 'More' are visible, along with 'Settings' and 'Tools' links. The search results indicate 'About 10,500 results (0.48 seconds)'. Three results are displayed, each with a red box highlighting an email address found in the text:

- Result 1:** `in.linkedin.com > shubham-shubhambhutani13-gmail-co...`
shubham shubhambhutani13@gmail.com - Ambala, Haryana ...
View **shubham shubhambhutani13@gmail.com's** full profile to. Check mark See who you know in common; Check mark Get introduced; Check mark Contact ...
- Result 2:** `in.linkedin.com > khandelwalshubham`
Shubham Khandelwal - Business Analyst : Security Product ...
View **Shubham** Khandelwal's profile on LinkedIn, the world's largest professional ... **Shubham** has 8 jobs listed on their profile. ... **kh. [redacted] n@gmail.com** ...
- Result 3:** `in.linkedin.com > madheysia`
Shubham Madheysia - Software Development Engineer ...
FrontEnd Developer (JS) @ OYO Rooms. -- Intern at 2 startup. -- IIT Roorkee alumni. Looking for SDE role. Available on hangout (s[redacted]07@gmail.com) and ...

Email Extraction Using Google Dorks

Now you can see that here we have successfully obtained email addresses by searching only on the browser without much effort.

The screenshot displays a web application interface for email extraction. At the top, a status bar shows a green power icon, the text "Total Email ID's Found : 11", and a gear icon for settings. Below this is a control bar with an "Autosave" toggle switch (currently off) and an information icon, and an orange "Automation" button. The main area contains a list of 11 email addresses. To the right of the list are several action buttons: a "Select" button, a "Copy all" button, a "↓ TXT" button, a "↓ CSV" button, and an "Autosave" button.

Email Address	Action
shubhambhutani13@gmail.com	Select
rto36@gmail.com	
shubhamkhoiwal8@gmail.com	Copy all
forcefoxtechnologies@gmail.com	
rathores301@gmail.com	
20shubhoiltradingcompany19@gmail.com	↓ TXT
shubhamsharma555@gmail.com	
shubhamsingh99503@gmail.com	↓ CSV
shubhamgulatipec@gmail.com	
sdcontact27@gmail.com	Autosave
