

Module 5:

Networking Devices

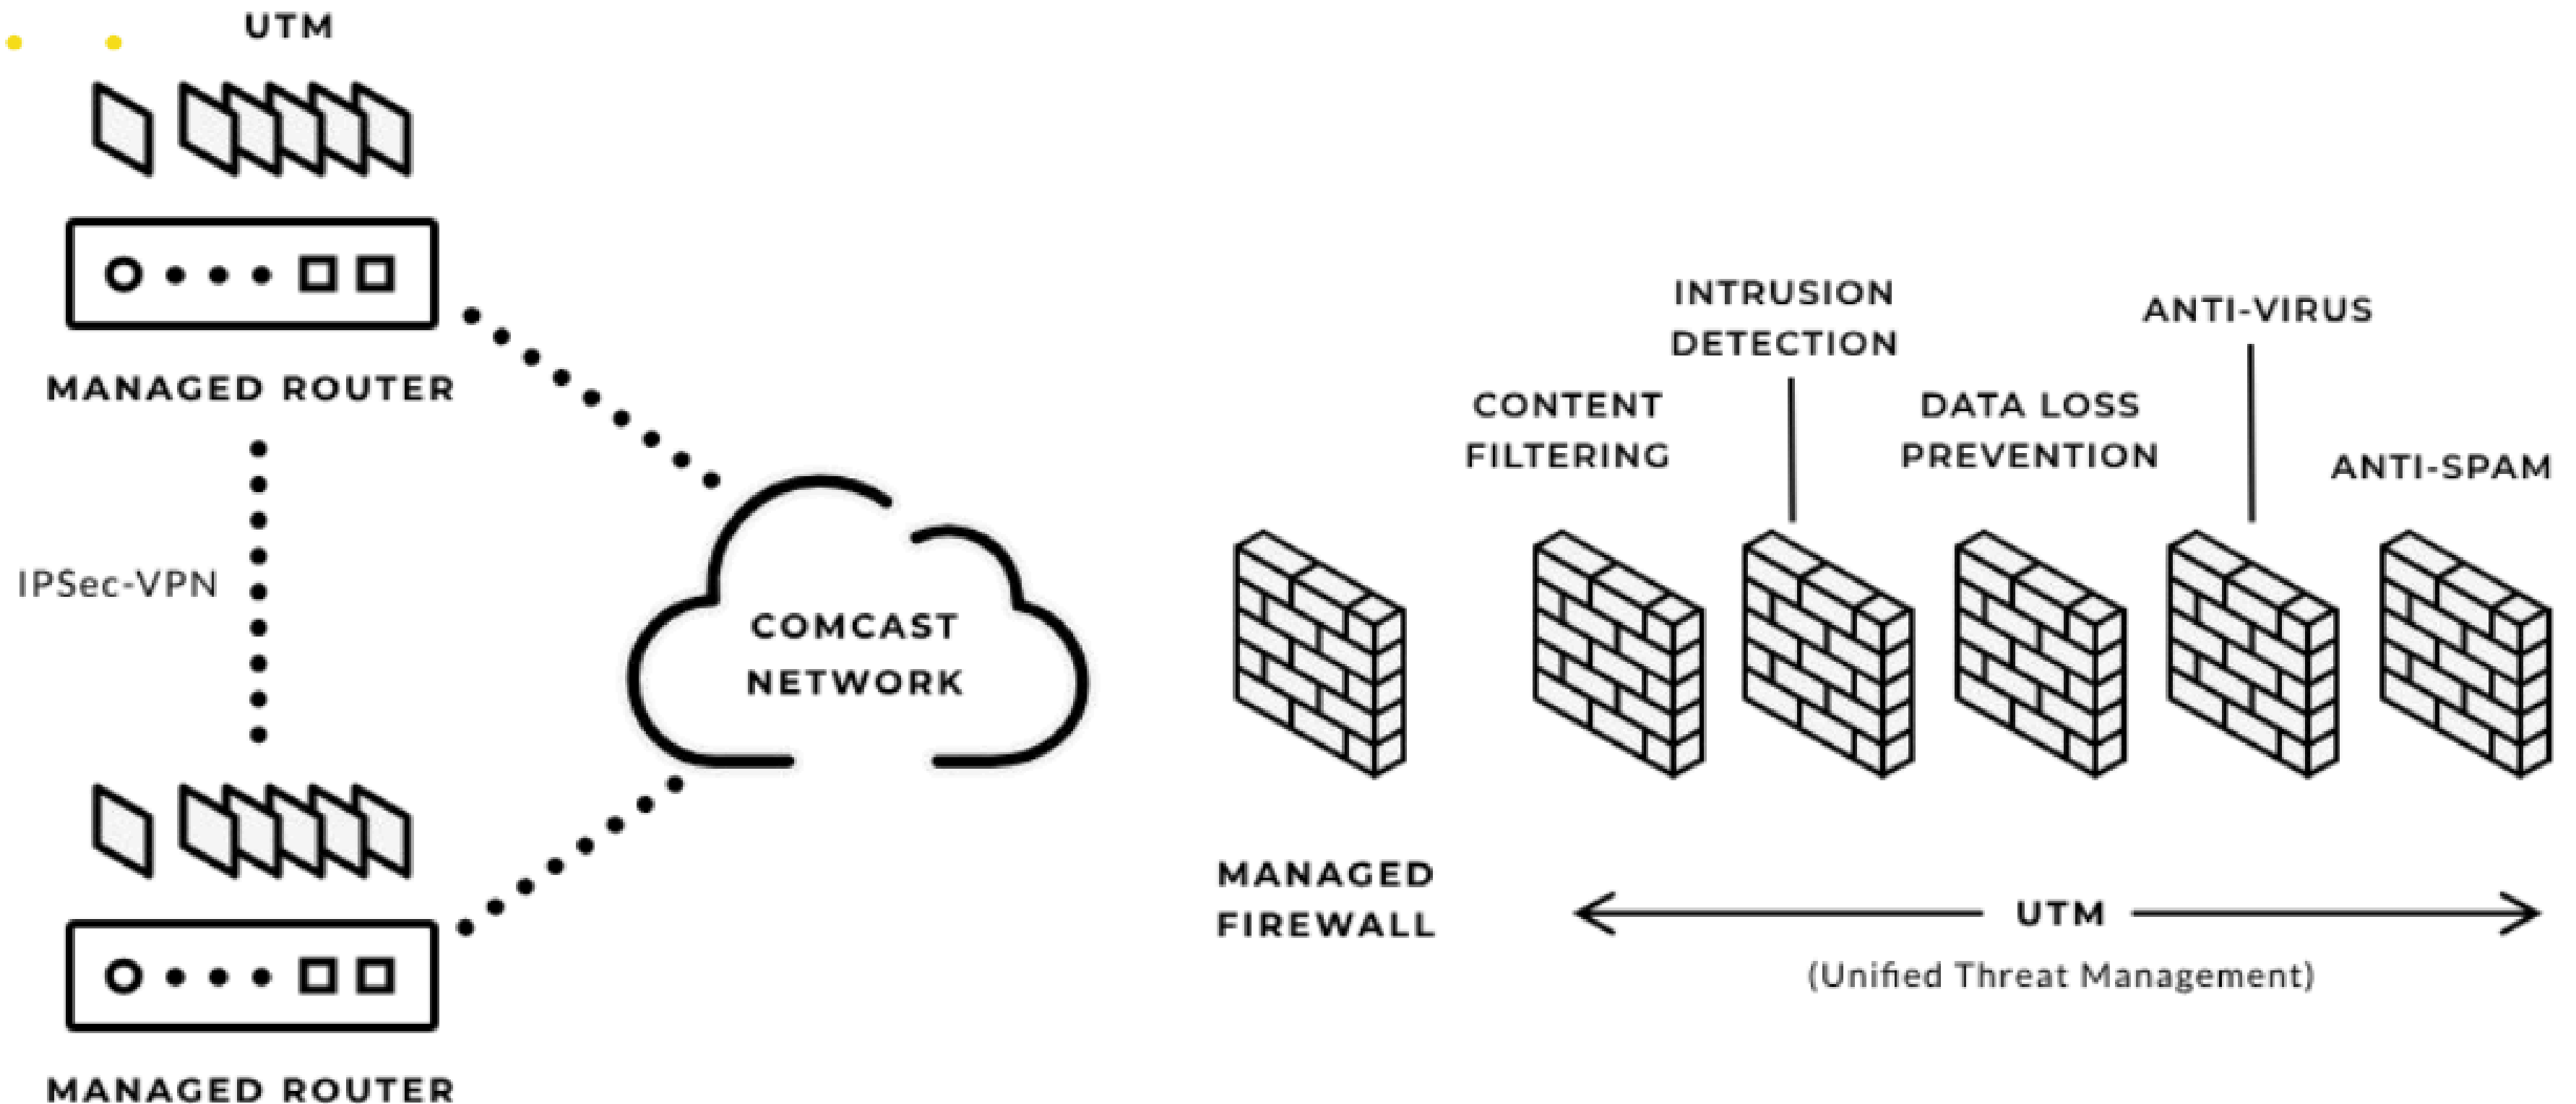

Topic 4: Network Security

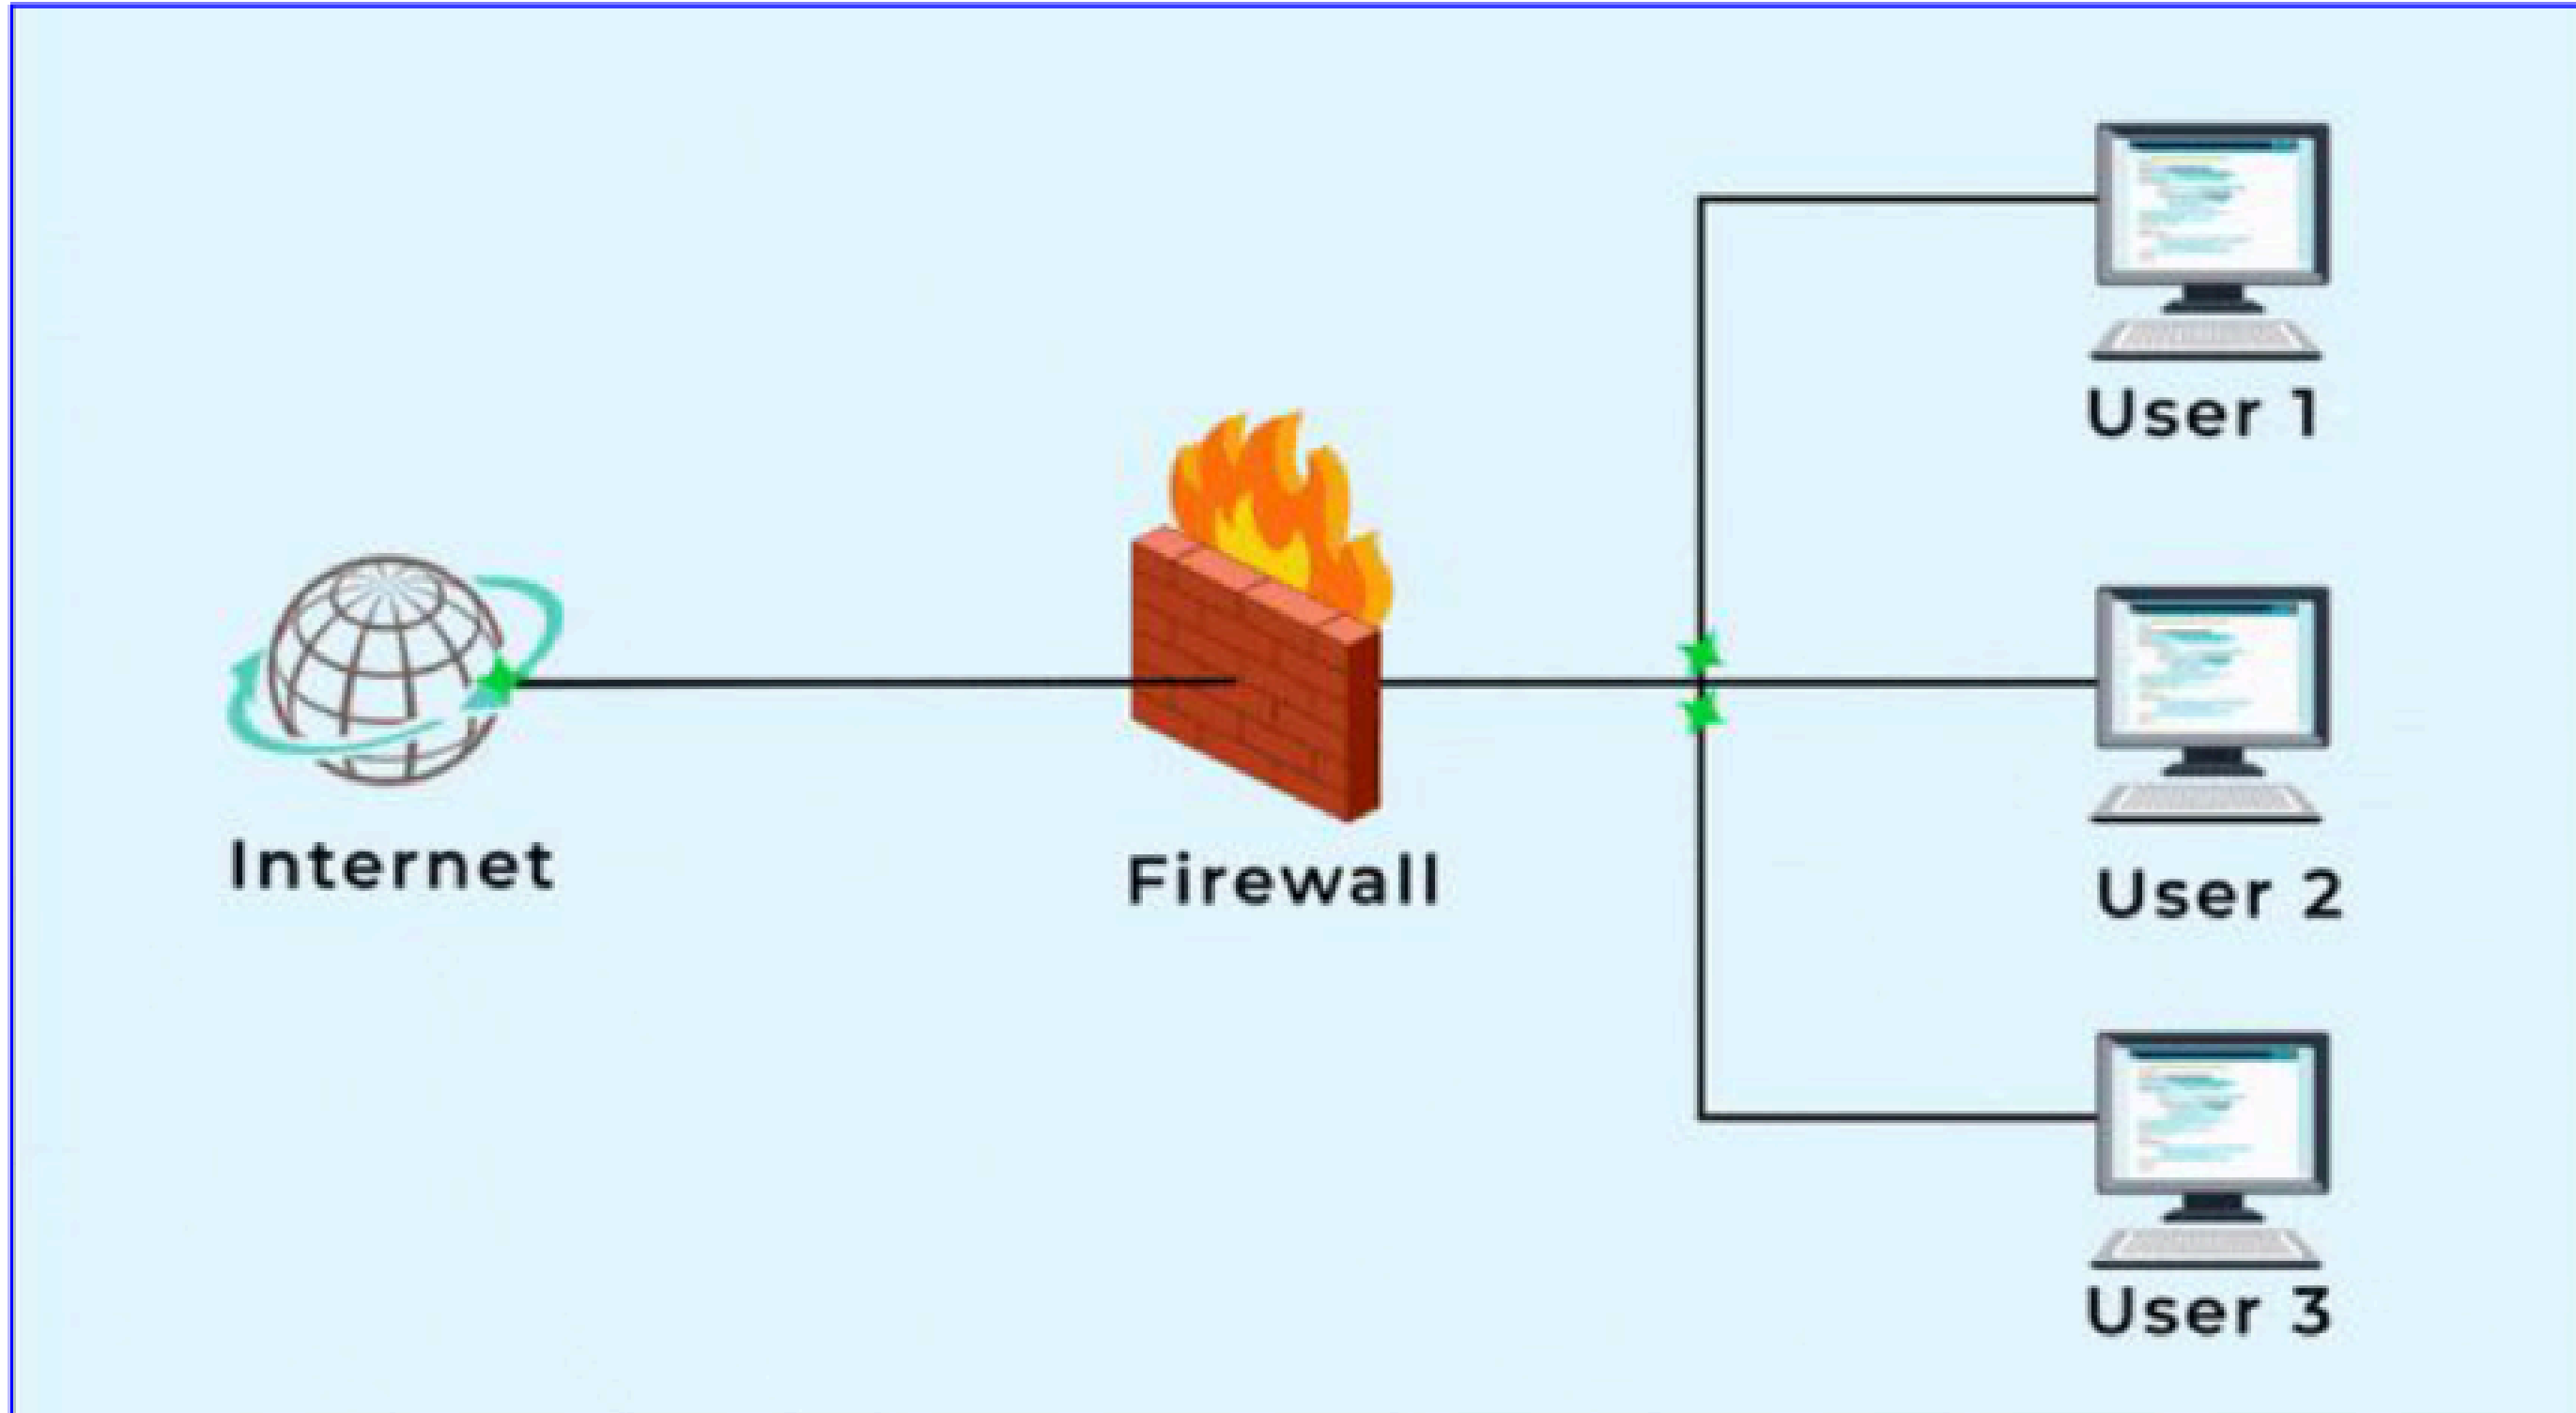

Devices

Network Security: Devices

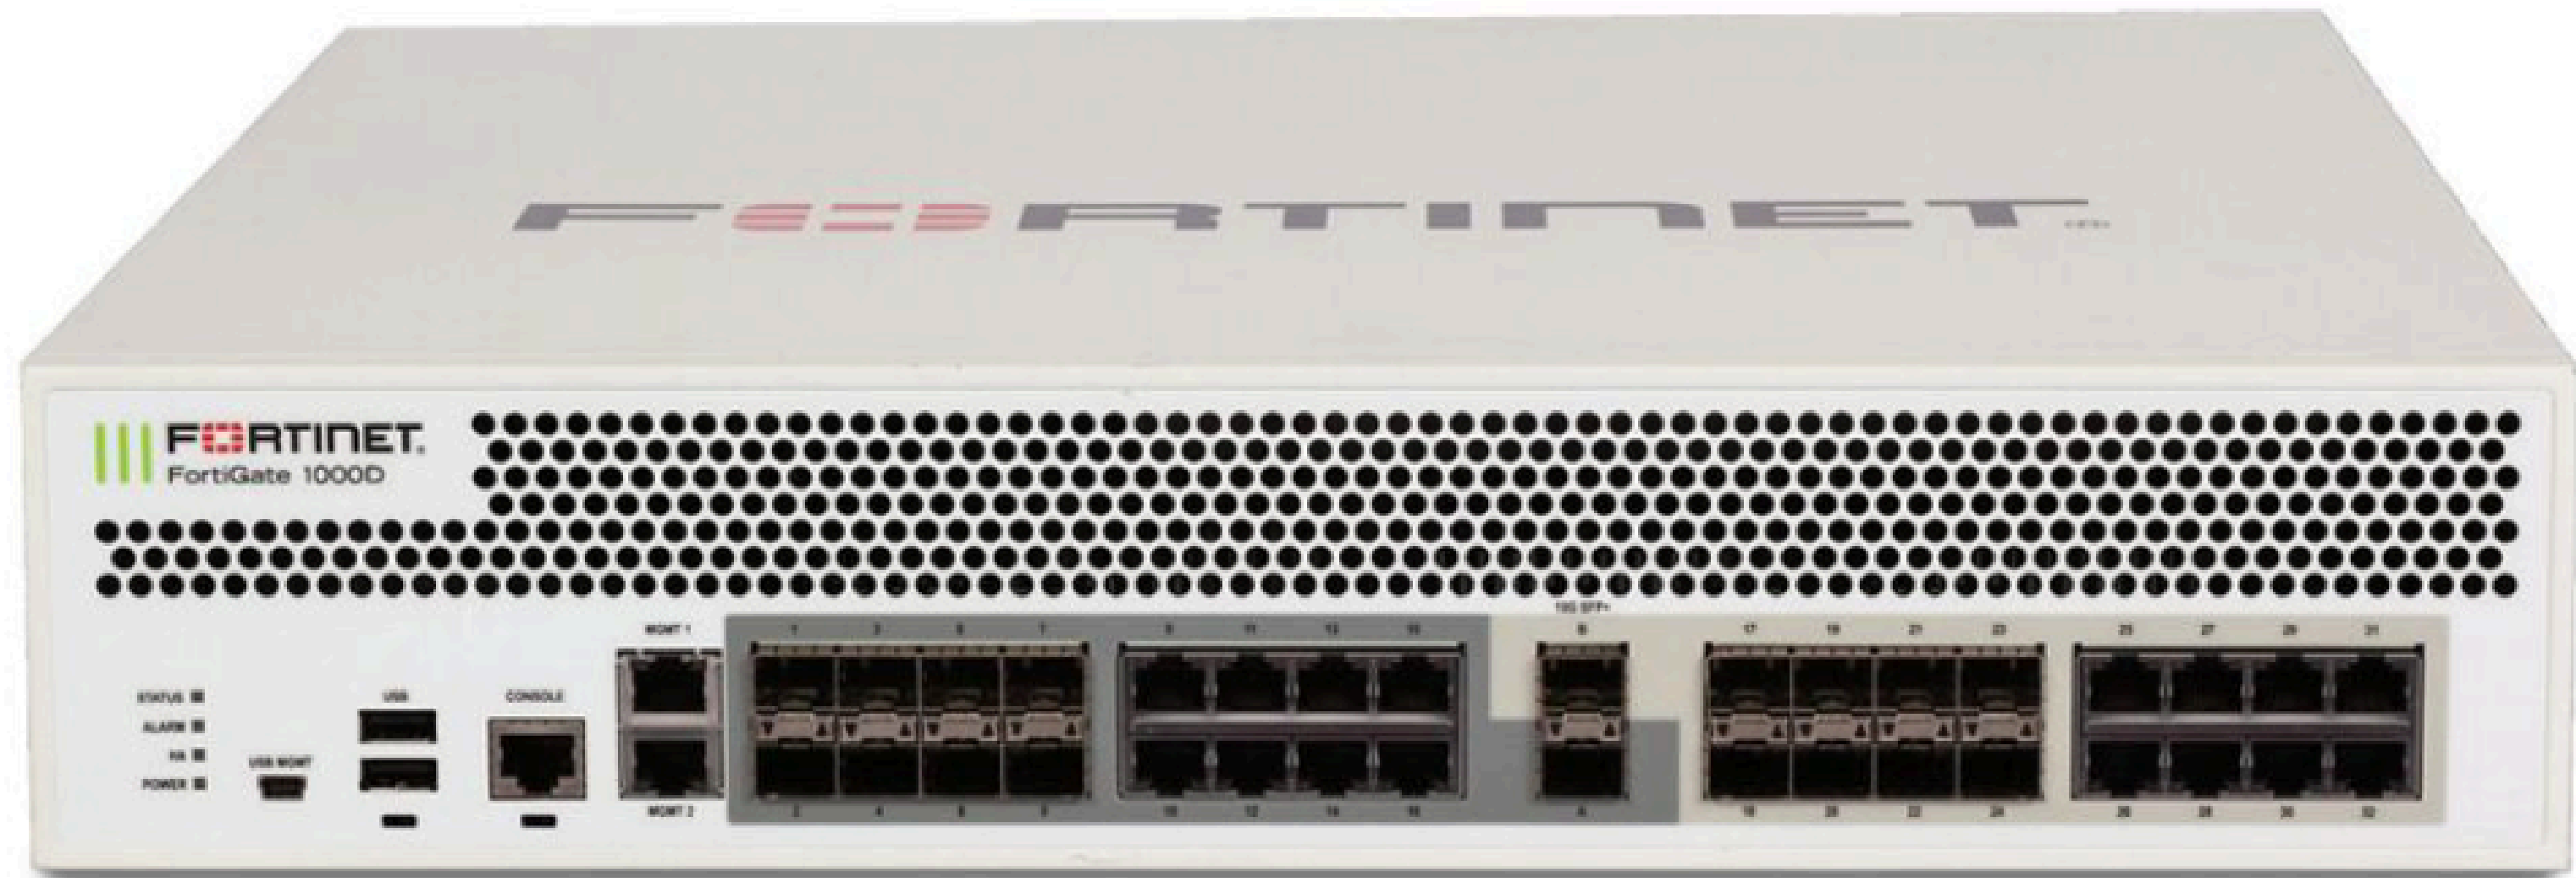

Network Security: Firewalls

Network Security: Firewalls

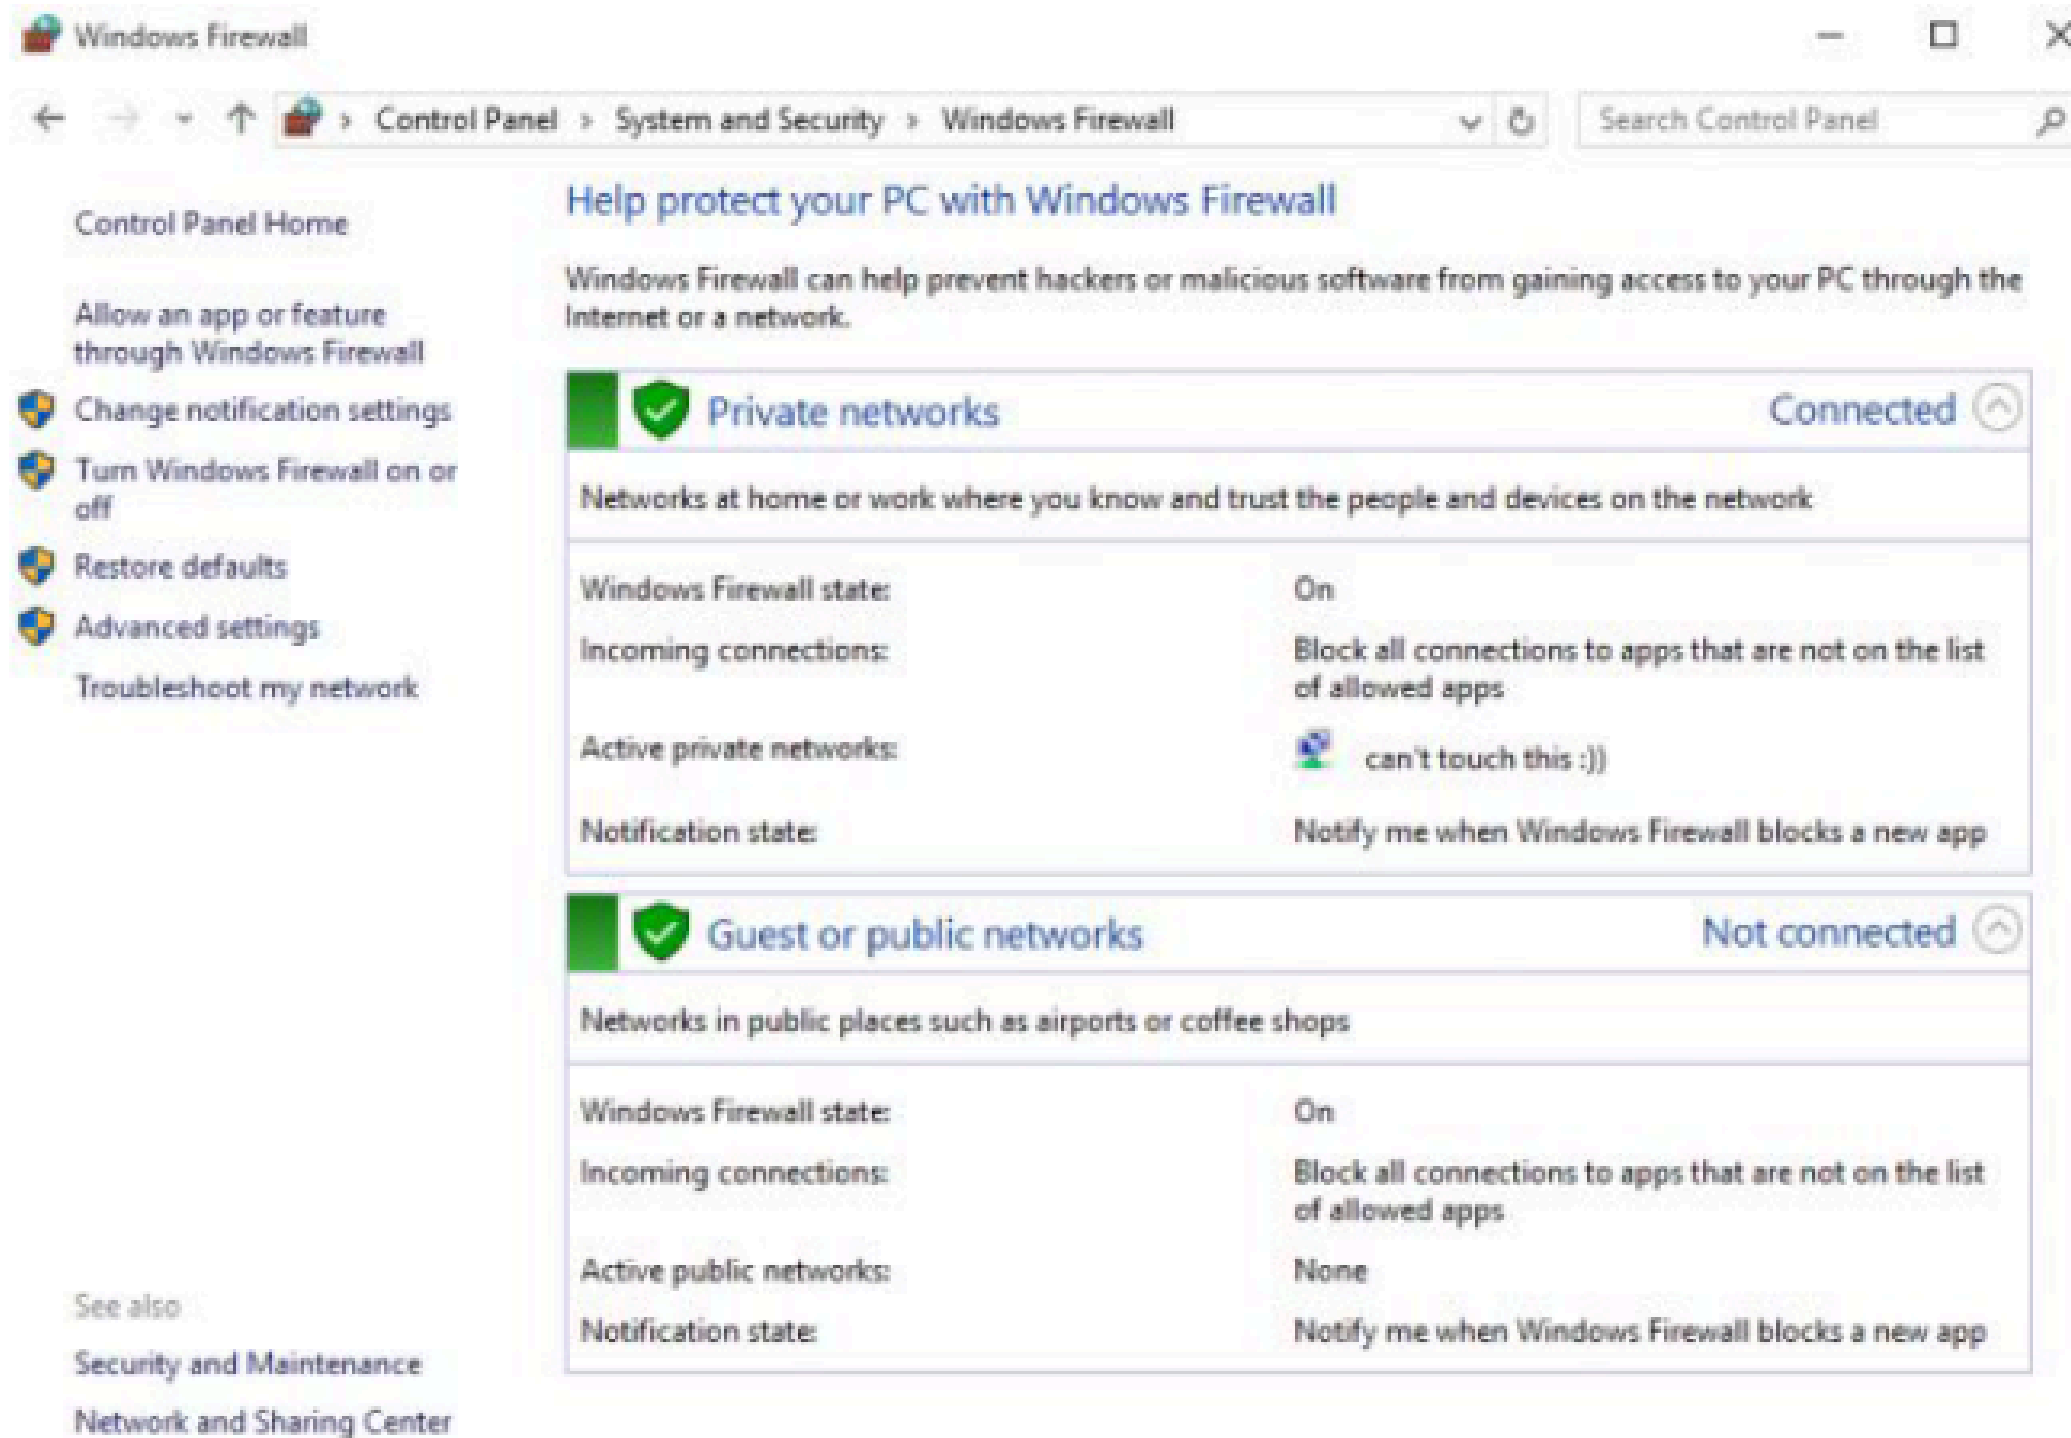

- **Computer firewall** is a component to limit malware spread by inspecting network traffic.
- Firewall could be **software** or **hardware**.
- Software; installed on computers, mobiles or routers.
- Hardware that is specialized in traffic inspection since the process requires at first monitoring then permit or deny packets based hardware resources for real-time inspection.
- Hardware requires to be configured.

Hardware Firewall
