

Module 1:

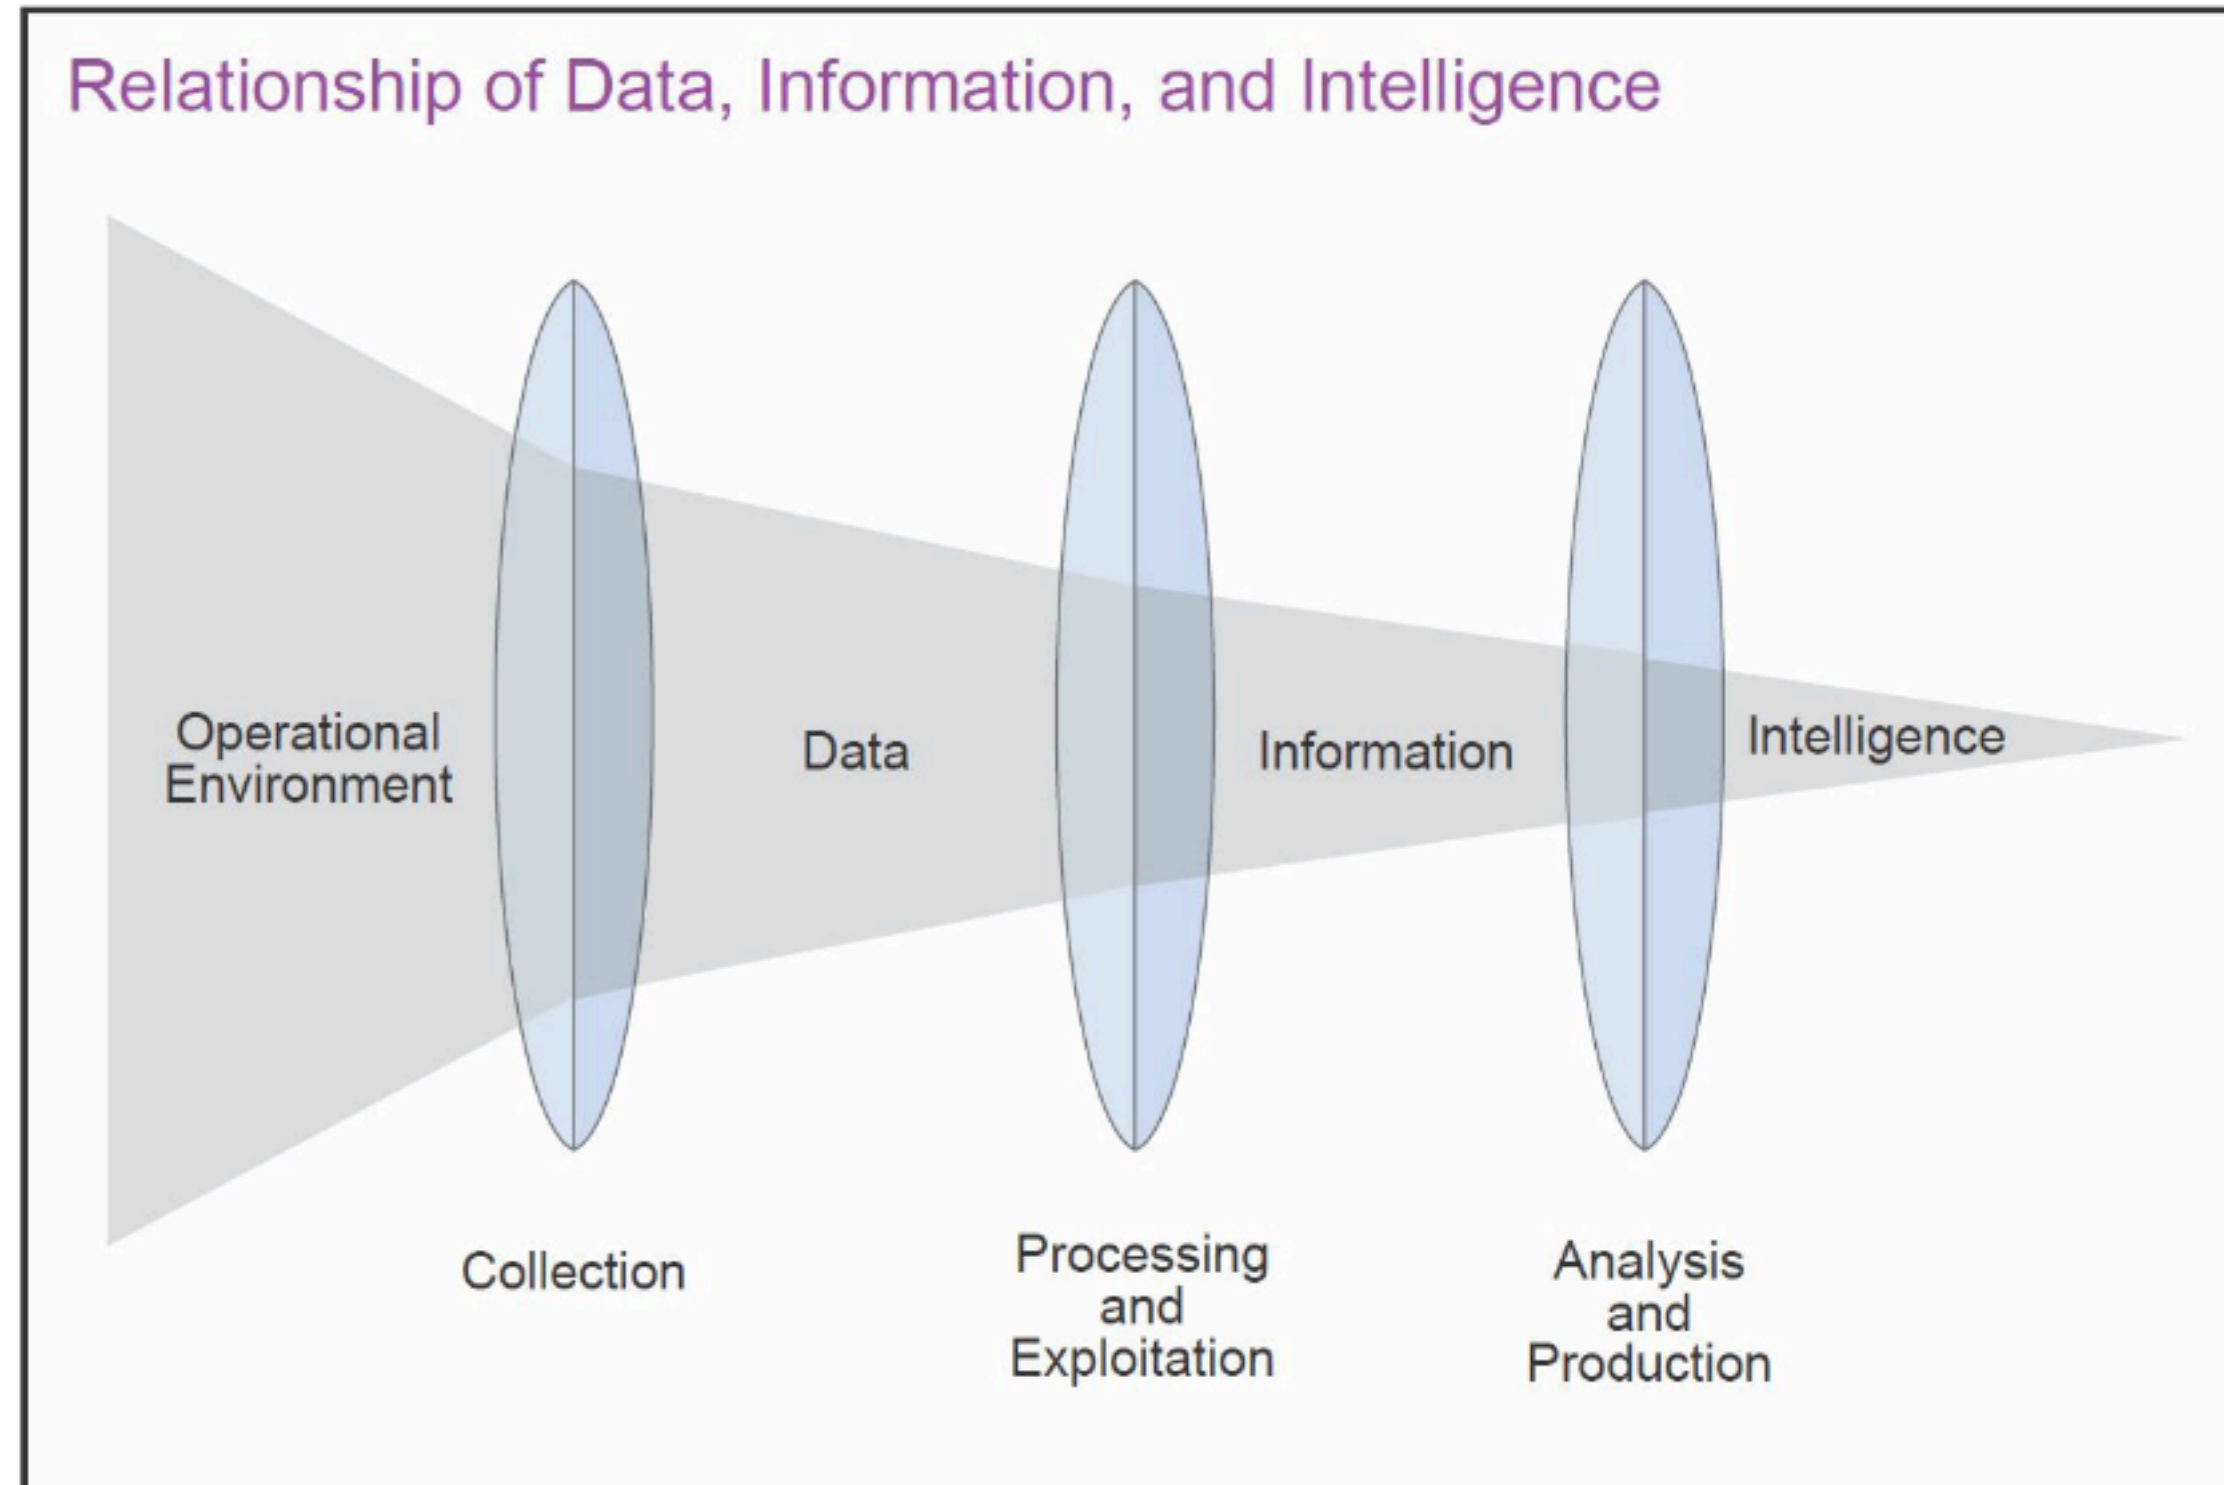

OSINT Overview

Topic 1: OSINT Overview

Data, Information, and Intelligence

What is OSINT?

OSINT (**O**pen **S**ource **I**NTelligence) is the process of gathering and analyzing publicly available data which can be found either online or offline.

Some Open Sources Examples:

- Traditional Media (newspapers, books, magazines, television and radio)
- Academic Sources (papers and conferences)
- Geospatial Information (maps)
- Internet (online publications, video sharing sites, blogs, forums and social media websites)

OSD, OSIF, and OSINT

OSD
(Open Source Data)

OSIF
(Open Source
Information)

OSINT
(Open Source
Intelligence)

Where/Why OSINT is Used?

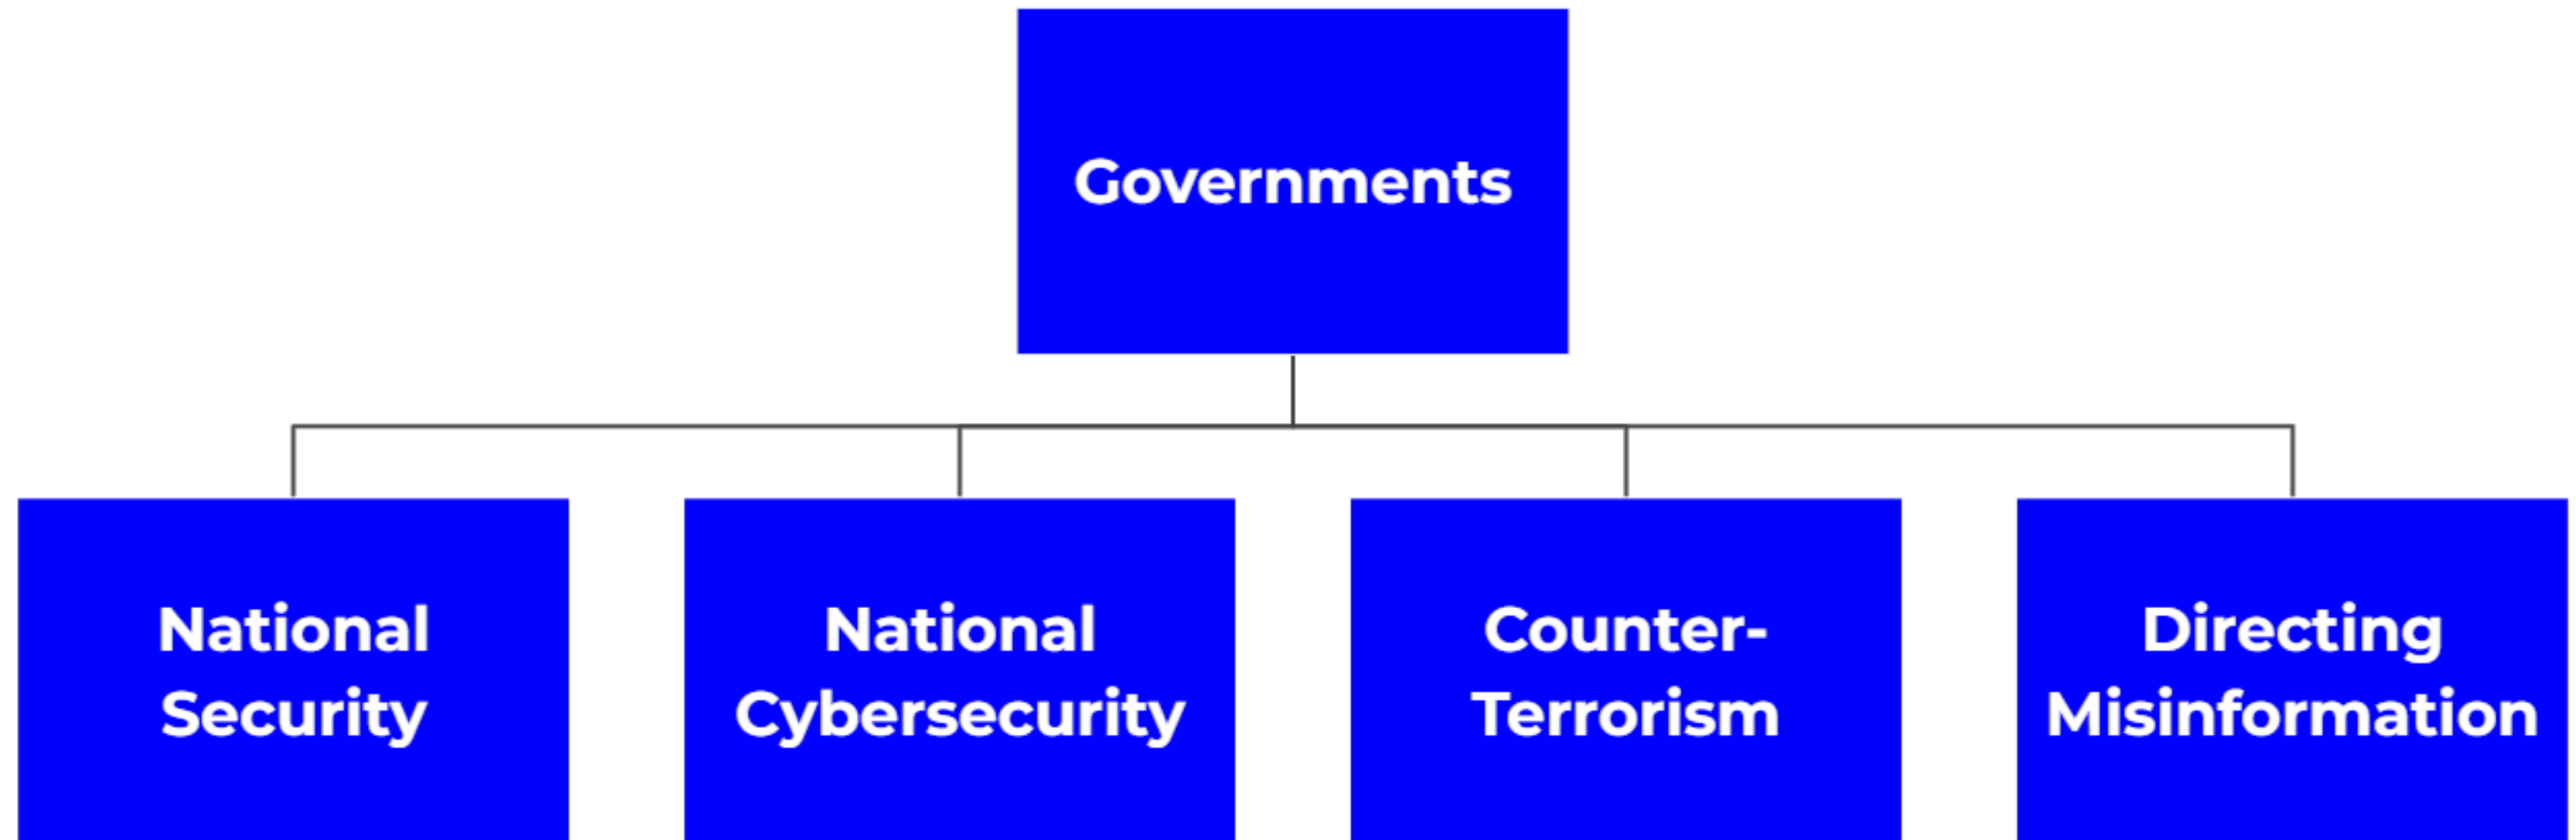

Governments

**Law Enforcement
Agencies**

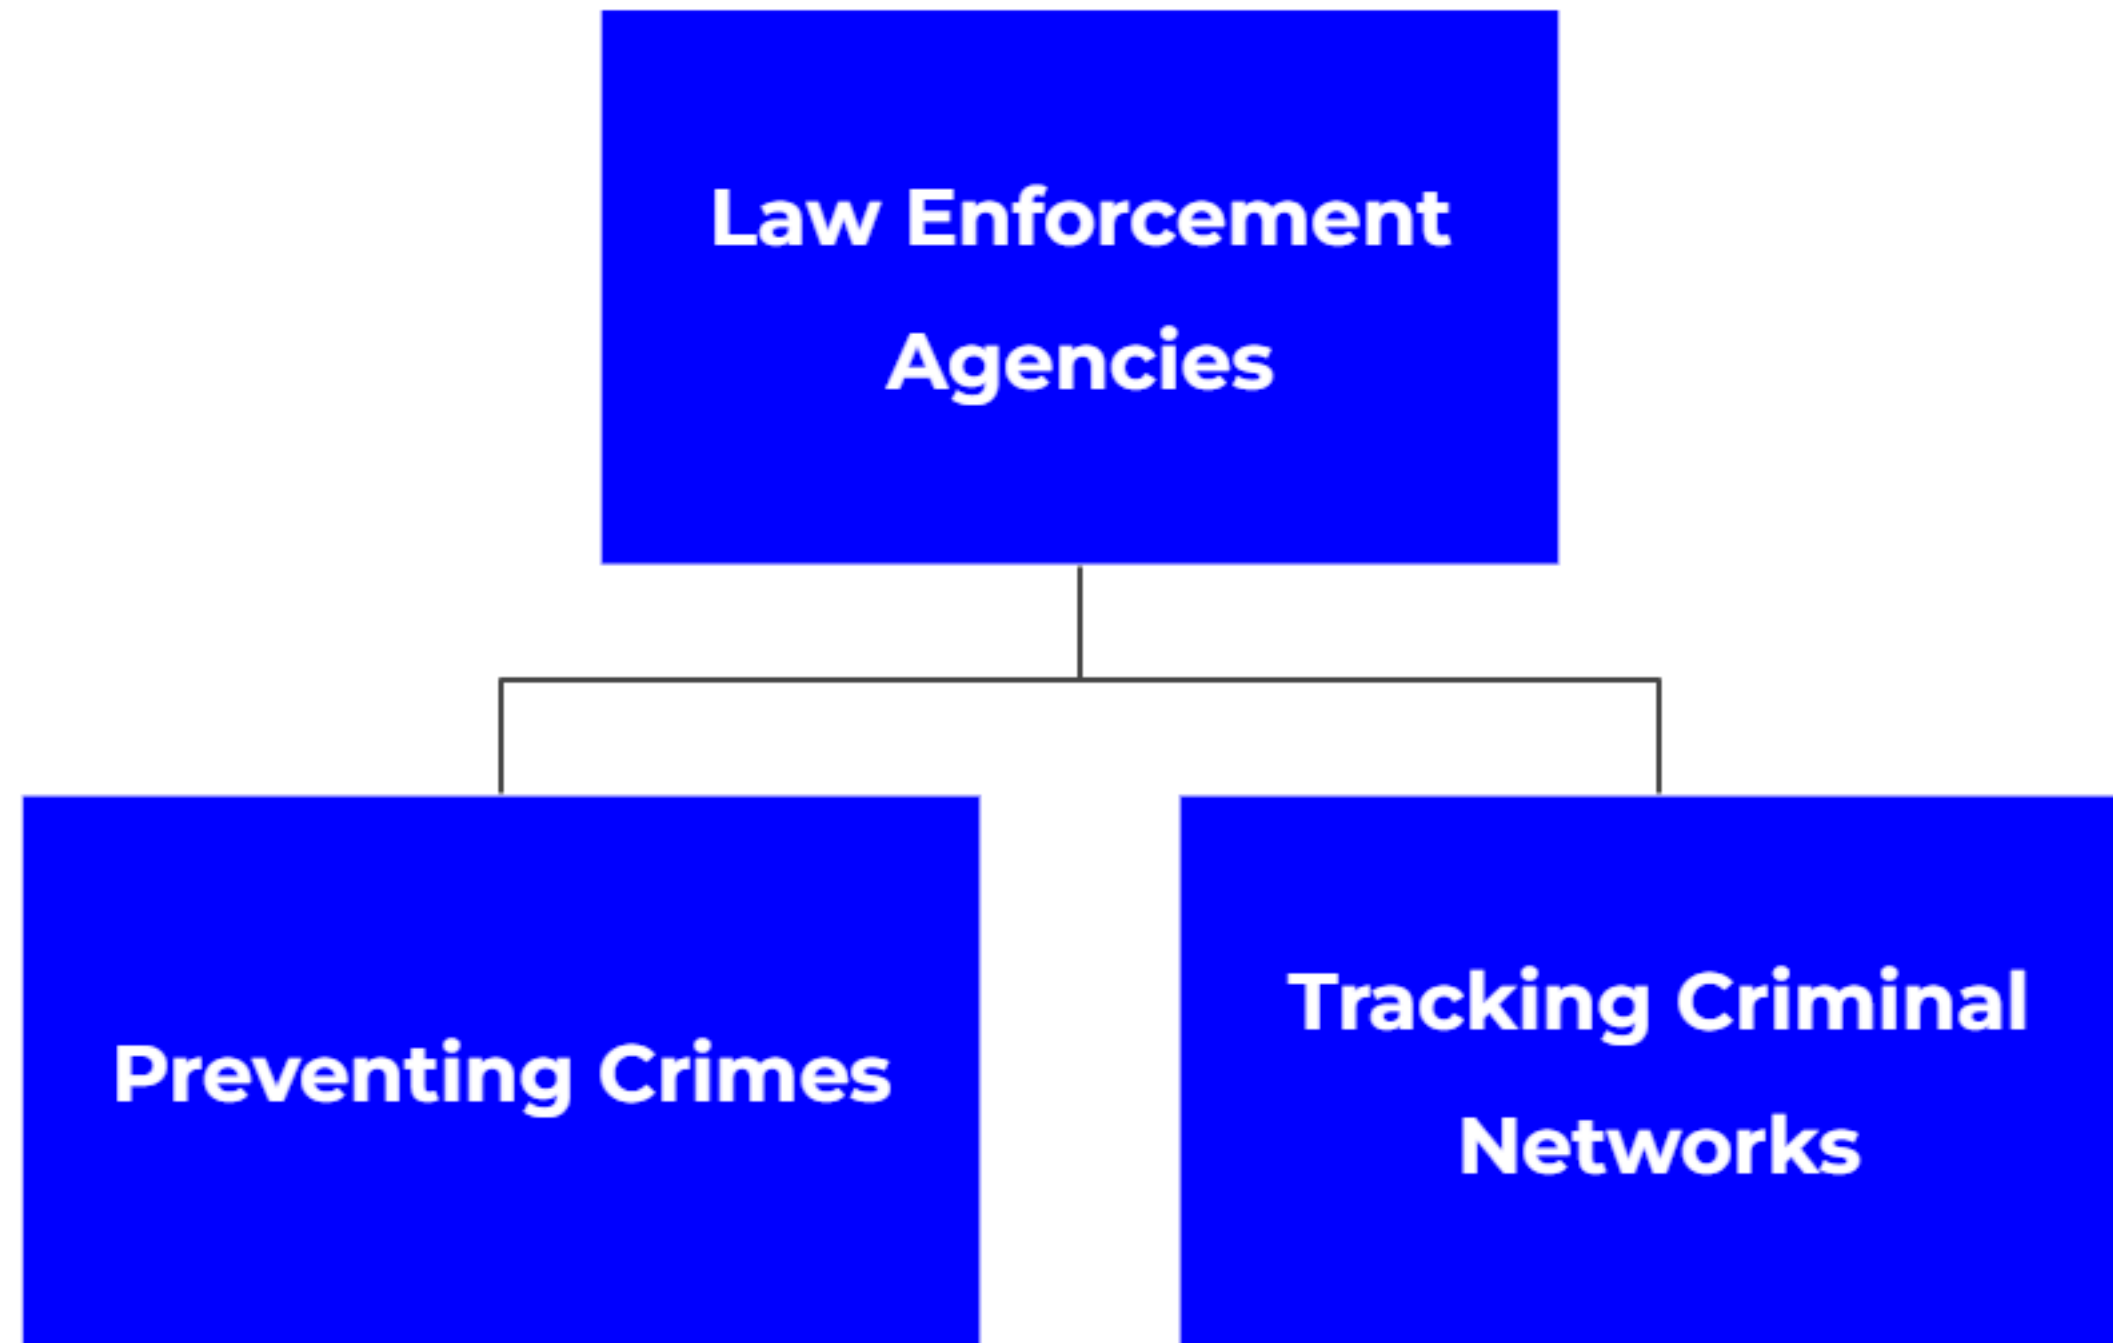

**Business
Corporations**

Cybersecurity

Bug Report Examples

The screenshot shows a Hackerone bug report interface. At the top, the Hackerone logo is on the left, and navigation links for SOLUTIONS, PRODUCTS, PARTNERS, COMPANY, HACKERS, and RESOURCES are on the right. The bug report title is "credentials leakage in public lead to view dev websites", highlighted with a red box. It has a bounty of \$511440 and 75 likes. The report was submitted by user "xsam" to the company "Zomato". The summary states: "I think this is the fastest (first reply, resolve, reward +bonus). Zomato such a professional program and for real they care about the security of their customers. Thank you Prateek and all the team :)". The timeline shows the report was submitted on March 18th (3 years ago). The description reads: "Hello Zomato team :) So after I found a new OSINT website [redacted] which fetch results from Pastebin website, I searched for 'zdev.net' and I got this interesting result [redacted]". An image attachment is shown with the filename "Image F443315: Capture_d_e_cran_2019-03-18_o_12.29.29.png" (390.31 KB). The image content is a screenshot of a web page with a large block of redacted text. On the right side of the interface, there is a sidebar with details: Reported on March 18, 2019 8:40am +0200, Participants (xsam and another user), State (Resolved {}), Reported to (Zomato), Disclosed on March 18, 2019 8:49am +0200, Severity (Low {0.1 - 3.9}), Weakness (None), Bounty (\$400), CVE ID (None), and Account de... (None).

Bug Report Examples

The screenshot shows a Hackerone bug report page. The title "Slack token leaking in stackoverflow and devtimes" is highlighted with a red box. The report is categorized as "112" and has a bounty of "\$448849". The summary by Shipt describes a Slack Webhook URI leak on Stackoverflow.com and devtimes.com, which allowed unauthorized messages to be posted as a bot. The summary by streak mentions more information on how to look for Slack webhook token leaks. The timeline shows the report was submitted by streak, triaged by shiptsecurity1, severity updated from High to Medium by shiptsecurity1, and a \$300 bounty was awarded by Shipt.

112 #448849 **Slack token leaking in stackoverflow and devtimes** Share: [f](#) [t](#) [in](#) [y](#) [v](#)

SUMMARY BY SHIPT

 A Shipt employee inadvertently posted a Slack Webhook URI including the authentication token on two public tech forums: Stackoverflow.com and devtimes.com. While this incoming webhook's configuration was restricted to posting in a single channel (created for testing this application) and only 2 Shipt users were in this channel, this allowed the researcher to enumerate those 2 users and post unauthorized messages as the bot associated with the Webhook. Upon receiving the report, Shipt's security team immediately invalidated the Webhook.

SUMMARY BY STREAK

 More information on how I look for slack webhook token leaks can be found [here](#)

TIMELINE

-  streak submitted a report to Shipt. Nov 22nd (3 years ago)
-  shiptsecurity1 Shipt staff changed the status to Triaged. Nov 22nd (3 years ago)
-  shiptsecurity1 Shipt staff updated the severity from High to Medium. Nov 22nd (3 years ago)
-  Shipt rewarded streak with a \$300 bounty. Updated Nov 22nd (3 years ago)

Report Details:

- Reported November 22, 2018 5:10pm +0200
- Participants:  streak
- State: Resolved ()
- Reported to: Shipt Managed
- Disclosed: August 29, 2019 4:16am +0300
- Severity: Medium (4 - 6.9)
- Weakness: None
- Bounty: \$300
- CVE ID: None
- Account de...: None

561#396467Github Token Leaked publicly for https://github.sc-corp.net

Share:     

TIMELINE

 th3g3nt3lman submitted a report to Snapchat. Aug 17th (3 years ago)

Description :

GitHub is a truly awesome service but it is unwise to put any sensitive data in code that is hosted on GitHub and similar services as i was able to find github token indexed *7 hours Ago* by user  - *Software Engineer - Snap Inc*

Issue & POC :

You can find the leak in this link :

[https://github.com/\[redacted\]/leetcode/blob/0eec6434940a01e490d5eecea9baf4778836c54e/TopicMatch.py](https://github.com/[redacted]/leetcode/blob/0eec6434940a01e490d5eecea9baf4778836c54e/TopicMatch.py)

Code 611 Bytes

Wrap lines Copy Download

OSINT Process

Planning and Direction

- Identifying the target and the scope
- Determining the investigation requirements

Collection

- Collecting the data from the open sources

Processing

- validating the data and making it usable

Analysis

- Determining whether the data is relevant and accurate
(Transforming the processed data into information)

Production

- Deriving an OSINT product

OSINT Framework

- <https://osintframework.com/>

Is a collection of tools and resources for OSINT professionals. It categorizes tools based on their functionality, such as search engines, social media analysis, and web scraping.

- IntelligenceX: <https://intelx.io/>

=> Gets results from different resources.

OSINT Framework

Deeper into intelx.io

- **General =>** For general search (ex. searching about a keyword).
- **Email =>** Gets results related to the email you wrote (ex. If there are leaked credentials related to this email).
- **Domain =>** Gets results related to Domain reputation and leaks for this domain.
- **IP =>** Gets results related to IP address reputation and leaks for this IP => 105.204.135.156
- **Bitcoin =>** Gets results related to the wallet transactions, balance, leaks for this wallet address.
Ex to use. 3FZbgi29cpjq2GjdwV8eyHuJJnkLtkcZc5
- **Image =>** Just copy the image URL and gets you results about where this image appeared on the internet and its meta data.
Ex to use.
<https://www.pandasecurity.com/en/mediacenter/src/uploads/2019/07/pandasecurity-How-do-hackers-pick-their-targets.jpg>
- **Username =>** Gets where this username appeared on different platforms => ex.PeekYou
- **Person =>** Gets possibilities about this person information on different platforms => whitepages

OSINT Framework

Deeper into intelx.io

- **Phone Number =>** phone number reverse lookup => searchyellodirectory 0491 570 006
- **Location 2 Map =>** Gives it Latitude and Longitude and give you information about this location.
Ex to use. 25.267410 || 55.292680
- **File =>** Allows you to search for files (ex. Puts some google dorking to get close match for file names you search for like ext:doc OR ext:docx OR ext:rtf leaked credentials)
- **VIN (Vehicle Identification Number)=>** Gets Vehicle information (ex. 4Y1SL65848Z411439)
- **Hash =>** Perform a reverse lookup of a hash (consider it a hash cracker ex. C53e479b03b3220d3d56da88c4cace20)
- **Social Media Tools =>** Results from multiple social media platforms (ex. FB, twitter, etc)
https://www.youtube.com/watch?v=cORKed0p3p8&ab_channel=AsmaaKotb
