

Module 5:

SOCMINT

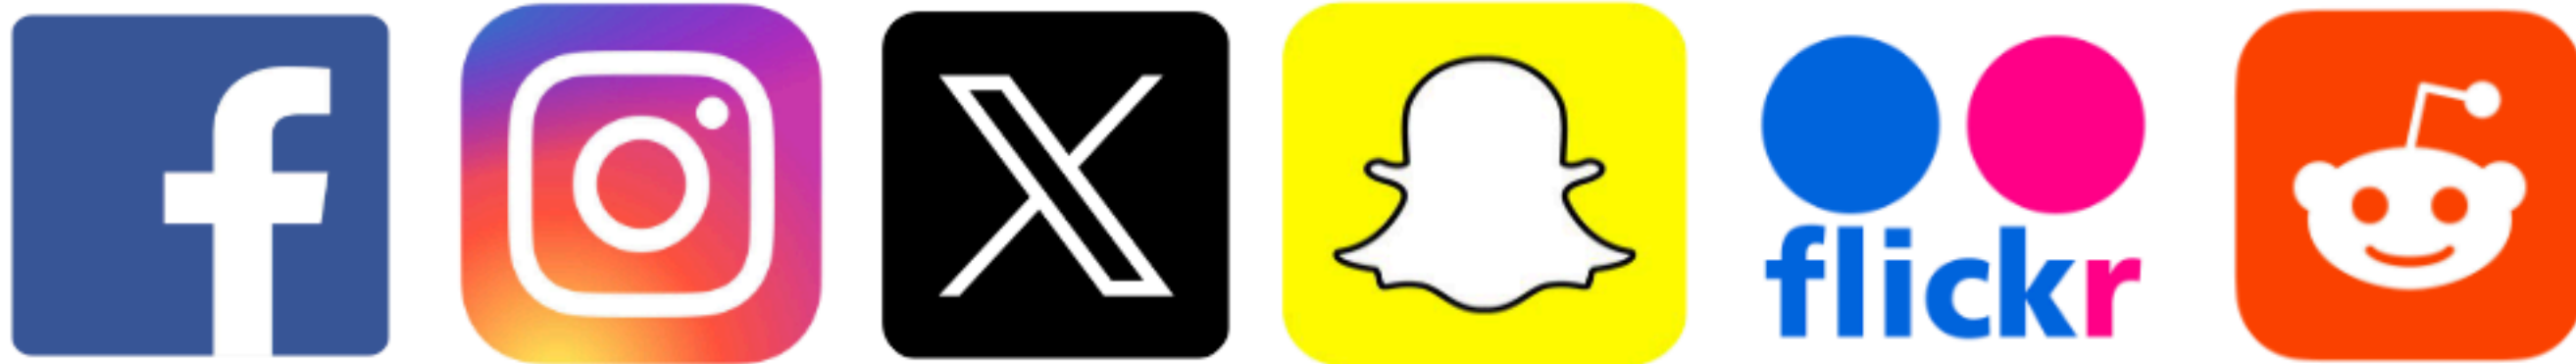

Topic 1: SOCMINT

What is SOCMINT?

Social Media Intelligence (SOCMINT) is the process of gathering and analyzing data from the social media platforms.

Investigating Usernames

Usernames are considered as very valuable information, because they may help in tracking the target, after considering some points, such as:

- Does the target use the same username in multiple sites?
- Does the target use multiple usernames?

There are a lot of tools used to find usernames across many social media platforms, such as:

<https://sherlock-project.github.io/>

<https://instantusername.com/>

<https://namecheckup.com/>

<https://namechk.com/>

<https://www.namecheckr.com/>

Analyzing Some Social Media Platforms

<https://twitter.com/search-advanced>: The advanced search filters in twitter can be used to narrow the search results according to the case.

× **Advanced search** Search

Words

Example: what's happening · contains both "what's" and "happening"

Example: happy hour · contains the exact phrase "happy hour"

Example: cats dogs · contains either "cats" or "dogs" (or both)

Example: cats dogs · does not contain "cats" and does not contain "dogs"

× **Advanced search** Search

Example: 280 · Tweets with at least 280 replies

Example: 280 · Tweets with at least 280 Likes

Example: 280 · Tweets with at least 280 Retweets

Analyzing Some Social Media Platforms

<https://accountanalysis.app/twitter/account/salmikai026> :_account analysis tool for twitter

Analyzing Some Social Media Platforms

<https://birdhunt.co/>: This tool shows all the tweets within a chosen geographic location (noting that some tweets may not be accessible due to their owner's settings).

Analyzing Some Social Media Platforms

<https://whopostedwhat.com/>: This tool can be used to search for posts according to many filters that can be specified, such as: day, month, year, location and others.

Specific day

Posts about on

Specific month

Posts about on

Specific year

Posts about on

Example: Find all posts about [Facebook](#) from [October 2005](#)

Timerange

Posts about from until

Example: Find all posts about [Facebook](#) from [4th June 2005](#) until [8th July 2005](#)

Location

Posts about from the location (UID)

Example: Find all posts about [Facebook](#) from the location (UID) [106423786059675](#) (corresponds to Buenos Aires)

Analyzing Some Social Media Platforms

<https://www.sowsearch.info/>: This tool is a simple interface to show how the current Facebook search functions work, it can be used to search for posts, people, photos, videos, pages and more.

Search

What do you want to search:

Search Posts

Sort by most recent

add filter

Posts from public (needs a keyword):

add filter

Posts from Posts from specific entity (i.e.: page/user):

add filter

Restrict to posts published in group

add filter

Tagged with location

add filter

Filter by date

Start date:

End date:

Filter by keywords

Analyzing Some Social Media Platforms

<https://www.youtube.com/>: The search filters in YouTube can be used to narrow the search results according to the case.

FILTERS				
UPLOAD DATE	TYPE	DURATION	FEATURES	SORT BY
Last hour	Video	Under 4 minutes	Live	Relevance
Today	Channel	4 - 20 minutes	4K	Upload date
This week	Playlist	Over 20 minutes	HD	View count
This month	Movie		Subtitles/CC	Rating
This year			Creative Commons	
			360°	
			VR180	
			3D	
			HDR	
			Location	
			Purchased	

Analyzing Some Social Media Platforms

<https://mattw.io/youtube-metadata/>: This tool gathers singular details about a video and its uploader, playlist and its creator, or channel. Such as: Statistics, geolocation information, thumbnails and more.

01 YouTube Metadata Normal Bulk Dark mode

YouTube Metadata normal grabs singular details about a video and its uploader, playlist and its creator, or channel.

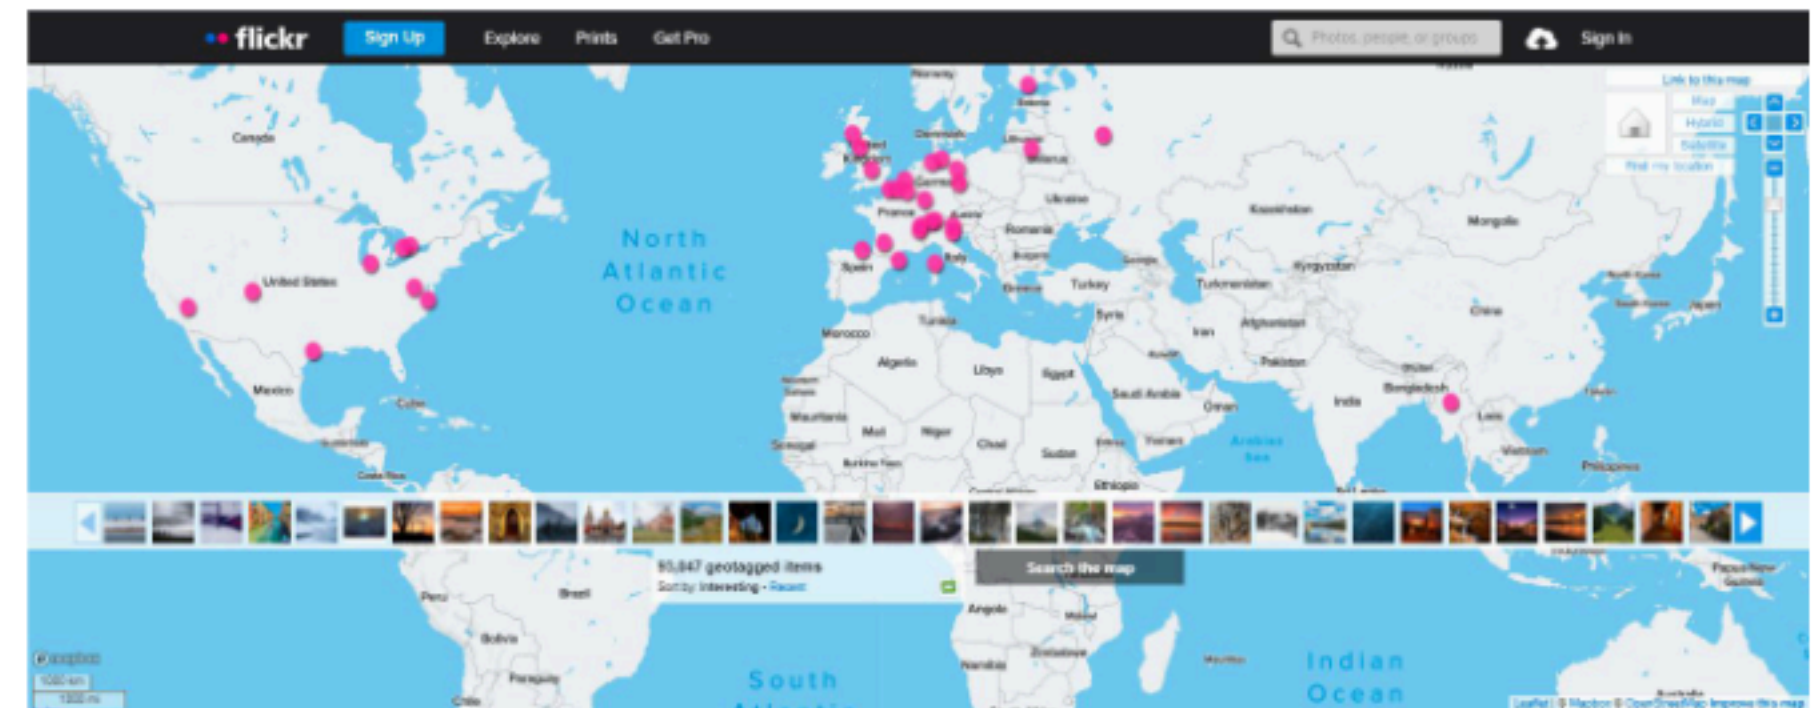

Submit a link to a video, playlist, or channel

Analyzing Some Social Media Platforms

Understanding social media platforms' features

Understanding the functionality of the social media sites you're targeting is one of the important skills in SOCMINT because it will help you navigate and use them effectively in your investigation.

For example, [Flickr](#) is a well known image and video hosting social media platform which contains several features, such as [Flickr Map](#), which is a map that contains the geotagged users' photos

Use Case

Assignment: We just have a username “EddKing6” and we need to know his email address.

Answer:

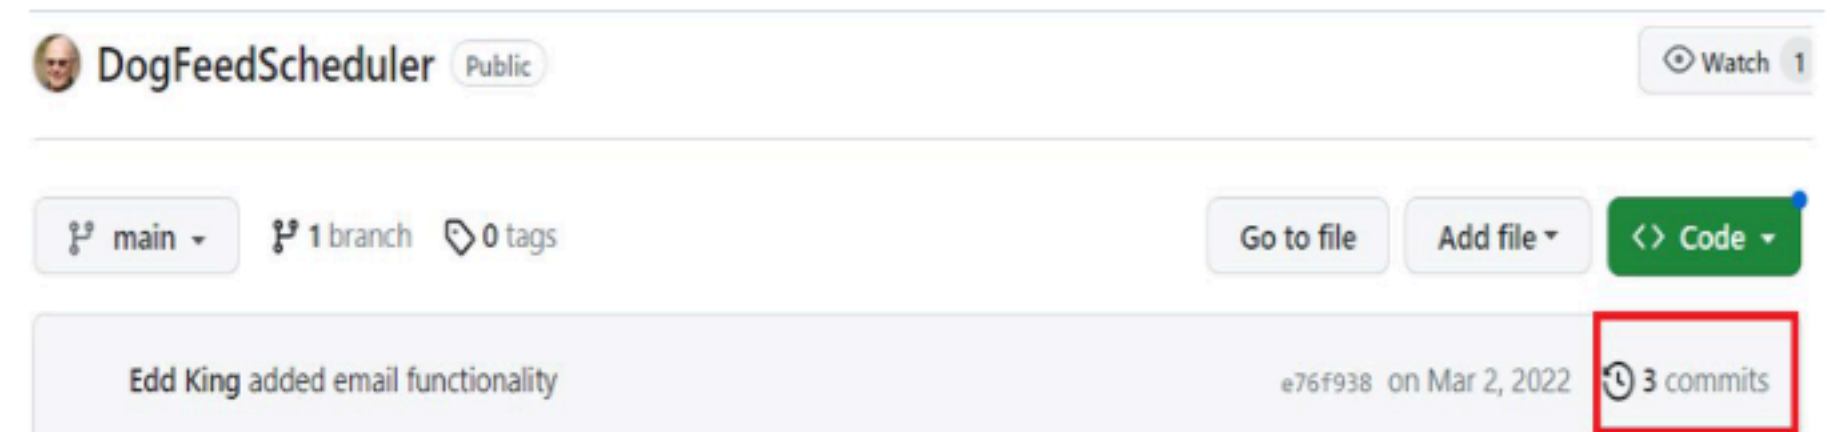

=> Use google search about “EddKing6”.

=> You will find github link:

<https://github.com/eddking6>

=> Open the recent commits

=> You will find the email under the “added email functionality”

```
+  
+ func sendmail(srv gmail.Service, frommail string) {  
+     temp := []byte("From: 'me'\r\n" +  
+         "reply-to: blobcorpciso@gmail.com\r\n" +  
+         "To: blobcorpciso@gmail.com\r\n" +  
+         "Subject: Feed Spot \r\n" +  
+         "remember to feed spot")  
+ }
```
