

Module 3:

Digital Forensics

Topic 1: Introduction to Digital Forensics

What is Digital Forensics?

- Investigation/Analysis that takes place after an incident “Cybercrime” has happened
- Try to answer questions:

Who, what, when, where, why, and how

Common Types of Digital Forensics

01	Computer Forensics	• Steganography • OS (Windows/Linux) Forensics • Memory Forensics • Files recovery
02	Network Forensics	• Packet Capture • Packet Analysis
03	Web Forensics	• Web Attacks Analysis • Log analysis

Digital Forensics Process

- It is a science of finding evidence from digital media like a computer, mobile phone, server, or network.
- Digital Forensics is defined as the process of identification, preservation, analysis , extraction, and documentation of computer evidence which can be used by the court of law to prove cybercrime act.

Digital Forensics Process

Identification

- Identify the purpose of investigation
- Identify the resources required

Preservation

- Data is isolate, secure and preserve

Analysis

- Identify tool and techniques to use
- Process data
- Interpret analysis results

Documentation

- Documentation of the crime scene along with photographing, sketching, and crime-scene mapping

Presentation

- Process of summarization and explanation of conclusions is done with the help to gather facts.

Digital Forensics Jobs

- Computer Forensics Investigator.
- Information Security Analyst.
- SoC Analyst
- Incident response(IR).
- Mobile forensics expert
- Computer crime investigator
